1150 14.10 2323 **CBC North relay**, // CFYK-1340. CBQD Ft. Resolution NT was listed here previously, but not listed in the new NRC-log. A rather sensational pass over the Pole if it's one of the 40-watt relays. The sunset line stretched from Mid-Manitoba and NW-wards, so the station should be located East of this line. Very weak; modest EU QRM and not least the absence of CKX Brandon made this possible. At the same time several of the stronger Alberta stations were heard despite well before their sunset.

 1600 15.10 0831 KGST Fresno CA up and down for some time, sometimes very strong but only when not speaking! ID's mostly as "La Mexicana" but once noted with "KGST La Mexicana" ID.
